1.4. Lectures and Tutorials

We will have **three hours for lectures and one hour for tutorials every week**. Since the class size is quite large, it may be difficult for us to give you the kind of personal attention that is ideal. Therefore the onus is on you to be attentive in the class and make the best use of the lectures. It may not be possible for you to take down the class notes; in fact it is not necessary as the lecture slides will be uploaded on the moodle site for the course.

As far as the tutorials are concerned, **each division will be divided into 9 tutorial batches**. Each batch has a “**course associate**”. The tutorials are meant for you to practise problem solving. You are expected to try the problems from the relevant tutorial sheet before coming to the class. You should also make use of the tutorial hour to clear your doubts with the course associate.

In our experience the students who do well are precisely those who attend the classes regularly and study systematically from day one. You are strongly encouraged to read the reference books; copies of these books are there in the Central Library. You are, of course, welcome to approach either us or your course associate for any guidance or assistance regarding the course.

1.5. Moodle

All the information regarding the course will be shared via Moodle. Please, check Moodle regularly. The students are highly encouraged to ask their questions or doubts **only via Moodle** (You can send us emails via Moodle). You can post your doubts/ questions on the ‘Doubt forum’ of the Moodle.

We will use Moodle to communicate with you.

1.6. Policy on Attendance

Attendance in the lectures and tutorials is compulsory.

1.7. Tentative Evaluation Plan

1. There will be **one quiz** common to all the four divisions of **20 marks**. This will be on **Friday, May 19, 2023, during 8:30-9:25 AM**. Syllabus for the quiz will be announced in the class.
2. The **End-semester examination**, scheduled to be held during **June 12-19, 2023** will be for **30 marks**. The syllabus for Endsem is the material covered in all the lectures.

A make-up quiz or re-exam can be conducted **Only** in the case of medical or family emergency provided **valid supporting documents are produced on time**.

 (iv) $\frac{d^4 y}{dx^4} + (\sin x) \frac{dy}{dx} + x^2 y = 0$. (v) $(1 + y^2) \frac{d^2 y}{dt^2} + t \frac{d^6 y}{dt^6} + y = e^t$.

Q.2. Formulate the differential equations represented by the following functions by eliminating the arbitrary constants a, b and c :

 (v) $y = a \sin x + b \cos x + a$ (vi) $y = a(1 - x^2) + bx + cx^3$ (vii) $y = cx + f(c)$.

Also state the order of the equations obtained.

Q.3. Solve the equation $x^3(\sin y)y' = 2$. Find the particular solution such that $y(x) \rightarrow \frac{\pi}{2}$ as $x \rightarrow +\infty$.

Q.4. Prove that a curve with the property that all its normals pass through a point is a circle.

Q.5. Find the values of m for which

- (a) $y = e^{mx}$ is a solution of
 (i) $y'' + y' - 6y = 0$ (ii) $y''' - 3y'' + 2y' = 0$.
 (b) $y = x^m$ for $x > 0$ is a solution of
 (i) $x^2 y'' - 4xy' + 4y = 0$ (ii) $x^2 y''' - xy'' + y' = 0$.

 (iv) $y''' + 8y = 9e^x + 65 \cos x$, ($y = ae^{-2x} + e^x(b \cos \sqrt{3}x + c \sin \sqrt{3}x) + 8 \cos x - \sin x + e^x$)

Q.7. Let φ_i be a solution of $y' + ay = b_i(x)$ for $i = 1, 2$.

Show that $\varphi_1 + \varphi_2$ satisfies $y' + ay = b_1(x) + b_2(x)$. Use this result to find the solutions of $y' + y = \sin x + 3 \cos 2x$ passing through the origin.

Q.8. Obtain the solution of the following differential equations:

 (iii) $y' = y(y^2 - 1)$, with $y(0) = 2$ or $y(0) = 1$, or $y(0) = 0$ (iv) $(x + 2)y' - xy = 0$; $y(0) = 1$

$$(vii) 2(y \sin 2x + \cos 2x)dx = \cos 2x dy; \quad y(\pi) = 0. \quad (viii) y' = \frac{1}{(x+1)(x^2+1)}$$

Q.9. For each of the following differential equations, find the general solution (by substituting $y = vx$)

$$(i) y' = \frac{y^2 - xy}{x^2 + xy} \quad (ii) x^2 y' = y^2 + xy + x^2$$

$$(iii) xy' = y + x \cos^2(y/x) \quad (iv) xy' = y(\ln y - \ln x)$$

Also show that after these arcs are removed, the remaining part of the ellipse does not satisfy the differential equation.

Q.12. The differential equation $y = xy' + f(y')$ is called a Clairaut equation (or Clairaut's equation). Show that the general solution of this equation is the family of straight lines $y = cx + f(c)$. In addition to these show that it has a special solution given by $f'(p) = -x$ where $p = y'$. This special solution which does not (in general) represent one of the straight lines $y = cx + f(c)$, is called a singular solution. Hint: Differentiate the differential equation.

Q.13. Determine the general solutions as well as the singular solutions of the following Clairaut equations. In each of the two examples, sketch the graphs of these solutions.

$$(i) y = xy' + 1/y'. \quad (ii) y = xy' - y'/\sqrt{1+y'^2}$$

Q.14. For the parabola $y = x^2$ find the equation of its tangent at (c, c^2) and find the ordinary differential equation for this one parameter family of tangents. Identify this as a Clairaut equation. More generally take your favourite curve and determine the ODE for the one parameter family of its tangents and verify that it is a Clairut's equation. N.B: Exercise 13 shows that the converse is true.

Q.15. In the preceeding exercises, show that in each case, the envelope of the family of straight lines is also a solution of the Clairaut equation.

Q.16. Show that the differential equation $y' - y^3 = 2x^{-3/2}$ has three distinct solutions of the form A/\sqrt{x} but that only one of these is real valued.

Q.1. State the conditions under which the following equations are exact.

- (i) $[f(x) + g(y)]dx + [h(x) + k(y)]dy = 0$
- (ii) $(x^3 + xy^2)dx + (ax^2y + bxy^2)dy = 0$
- (iii) $(ax^2 + 2bxy + cy^2)dx + (bx^2 + 2cxy + gy^2)dy = 0$

Q.2. Solve the following exact equations

- (i) $3x(xy - 2)dx + (x^3 + 2y)dy = 0$
- (ii) $(\cos x \cos y - \cot x)dx - \sin x \sin y dy = 0$

Q.5. If $\mu(x, y)$ is an IF of $Mdx + Ndy = 0$ then prove that

$$M_y - N_x = N \frac{\partial}{\partial x} \ln |\mu| - M \frac{\partial}{\partial y} \ln |\mu|.$$

Use the relation to prove that if $\frac{1}{N}(M_y - N_x) = f(x)$ then there exists an IF $\mu(x)$ given by $\exp\left(\int_a^x f(t)dt\right)$ and if $\frac{1}{M}(M_y - N_x) = g(y)$, then there exists an IF $\mu(y)$ given by $\exp\left(-\int_a^y g(t)dt\right)$. Further if $M_y - N_x = f(x)N - g(y)M$ then $\mu(x, y) = \exp\left(\int_a^x f(x')dx' + \int_a^y g(y')dy'\right)$ is an IF, where a is any constant.

Determine an IF for the following differential equations:

- (i) $y(8x - 9y)dx + 2x(x - 3y)dy = 0$
